CURRIER & WINTER,

Nos. 211 KEARNY STREET, FOUR DOORS NORTH OF SUTTER.

Of all the great curiosities which attract the most attention in 1863, are the wonderful improvements which are now attached to the well-known Wheeler & Wilson Sewing Machine, without the competition of the others. This is the only family sewing machine with the new silent feed motion. It makes one thousand button-holes per day, on linen, cotton, or woolen goods. It sews on the binding of a dress, without previous basting, in four minutes; and while sewing on one tuck makes the line of marks for another; gathers and sews on at the same time; hems silk or woolen goods with equal facility; cords and braids with surprising quickness; makes articles for men's as well as women's wear; takes two thousand stitches per minute, which is fifteen hundred stitches more than any other lock-stitch can make. This wonderful machine has no shuttle to thread five or six times before starting, which is a great saving of time. It is a positive fact that Wheeler & Wilson's Family Sewing Machines will do all the same kind of work that the other machines now on sale will do—will make the same single-thread loop-stitch that ravel out; also the double loop-stitch, which also ravel out very conveniently, because you can sew with one yard of thread all day long, sewing in your thread, then raveling it and sewing it in again, and so on—all right and very convenient; but you will find that the same Wheeler & Wilson Sewing Machine that does all these wonderful things, makes also the only straight, solid lock-stitch which cannot be raveled; perfectly safe to walk to church with clothing made with this stitch; also, this machine will make the three-thread embroidery stitch, which is the loop-stitch and lock-stitch combined, and forms the most beautiful ornamental finish, perfectly secure against raveling, and very durable. The American Institute, New York, reports: "This machine makes the lock-stitch, and ranks highest on account of the elasticity, permanence, beauty and general desirableness of application." This report was in accordance with the previous—the stitching when done and the wide range of its awards at the Fair of the United States Agricultural Society, at the Fairs of the American Institute, New York; Mechanics' Association, Boston; Franklin Institute, Philadelphia; Kentucky Institute, Baltimore; Mechanics' Association, Cincinnati; Mechanics' Association, St. Louis; Mechanics' Institute, San Francisco; Met. Mechanics' Institute, Washington. At the State Fairs of Maine, Mississippi, Kentucky, New Jersey, Virginia, Illinois, New York, Indiana, Tennessee, Connecticut, Ohio, Wisconsin, Vermont, Missouri, Michigan, Iowa, Pennsylvania, California; and at hundreds of country fairs. W. M. Stoddard, Agent for Pacific Coast, office No. 435 Montgomery Street, San Francisco.
