

SCHOLL'S PATENT GOPHER AND SQUIRREL EXTERMINATOR.

Diploma Awarded 1886 by the California State Board of Agriculture.

The above cut, with the following description, will be self-explanatory. **A** is a plain cylinder, made of galvanized iron, converging at the bottom to the point **C**, as shown. The top has an orifice for the purpose of draught, as has also the stem through which the air is blown by the bellows **B** (an ordinary hand bellows). The handle is for convenience in carrying. The top of the cylinder is removable. It is charged with ordinary chips, or other combustible matter, and enough green leaves or grasses to make combustion slow. Fire enough can be carried for a half days work. The ell **D** is for use where the gopher holes turn. The whole weight will not exceed thirteen pounds. A small tripod, or tongs, is furnished with above to support the cylinder when in use.

The practical working of this Exterminator has been tested in hundreds of localities, and it is absolutely worth its weight in gold to the farmers of California. **Price \$10.**

Scholl's Patent Ornamental Crown Chimney Caps.

SURE CURE FOR SMOKY CHIMNEYS.

DIPLOMA AWARDED AT MECHANICS' INSTITUTE FAIR, 1885.

I claim that with my **CHIMNEY CAP** it is not necessary to go to the expense of running a pipe to the top of your next door neighbor's house, whose roof happens to be higher than yours, to get a draught, as my Cap will remedy all defects; that it will create and increase a draught in any chimney that is free from obstructions within, sufficient to carry off all smoke, and keep itself clean, no matter in which position, angle or place it is set. Furthermore, that it will surpass anything heretofore invented for that purpose. I can also recommend it as a perfect Ventilator. For further information and particulars, inquire of
