

## Is poor lighting slowing down your office staff?

When lighting's not up to snuff, employees don't see as fast as they could and office productivity suffers. Eyestrain can cause costly mistakes. Morale can sink—along with your profits! But with a lighting system designed for their special needs, employees can see better, work gets done more efficiently—and more profitably!

Why not brighten *your* profit picture? See your architect, engineer—or contact PG&E—and learn how to improve your office lighting. Also, write the Northern California Electrical Bureau, 1355 Market Street, San Francisco 3, for *free* copies of "What's New In Office Lighting" and "Recommended Levels of Illumination."
