## Farmers, Attention!

### Improve your Wheat by Cleaning your Seed on The Golden Gate Separator!

I am now prepared to clean wheat for seed or market, on the farm or in Stockton, on the most reasonable terms.

After eight years experience in this business, I think I can give satisfaction.

A fair trial will convince the most skeptical, that it will pay to use my separator in preference to all fan mills.

My machine was invented by myself in this county and is adapted to the wants of this Coast.

A few points in which it is superior to all other machines :

1st. It has more screen surface than any hand separator in use.

2d. The screens are so arranged that they can be cleaned while in motion.

3d. It will save all the cracked wheat.

4th. It will not waste the plump wheat, in taking out the oats and barley; while fan mills in doing the same, blow the best of the wheat over.

5th. It will grade your wheat, giving you all the uniform large sized grain in one separation, and the small and shrunk grain in another, so that if you wish to improve your wheat by sowing the best, you can do so, (and that class of farmers who think small and shrunk grain the best for seed, can be accommodated in the second separation.)

My machine was awarded the First Premium at the San Joaquin Valley Fair in 1877.

Mr. W. O. Robinson, who lives on the Sonora road, was awarded the First Premium on wheat which was cleaned on my Separator, at the rate of 300 sacks per day.

I cleaned on one machine during the Fall of 1877, 38,375 bushels, among 87 farmers, (whose reference I can give if desired,) some of whom have employed me for the past eight years.

Machines made on short notice and warranted.

For terms and particulars call on or address.
