

STOCKTON PAPER MILLS.

Among the recently established enterprises in Stockton, as well as one of the largest and most important, is the one named above. It is owned and operated by a joint stock company, incorporated under the laws of California, under the name of the California Paper Company. The officers are: Egbert Judson, President; Albert Dibblee, Vice-President; Eugene Cooper, Secretary; Bank of California, Treasurer. Principal office, No. 10 California street, San Francisco. The mill is substantially built of brick and is 160x175 feet. It is situated on the south bank of Mormon Channel, near the Stockton Woolen Mills. The machinery is of the very best, and is driven by an engine of one hundred and fifty horse power. Printing and wrapping paper of excellent quality, and pasteboard only, are manufactured at present, though the manufacture of the finer qualities of paper will doubtless become a part of the business eventually. The present capacity of the mill is 8,000 pounds of printing paper, 4,000 pounds of wrapping paper and 4,000 pounds of board, daily. When running with a full complement of hands, fifty men, fifteen women and fifteen boys are employed. The Company has an abundance of capital, and is managed by first-class business men.

PACIFIC AGRICULTURAL WORKS.

In 1875 the Pacific Agricultural Works were established on the corner of California and Lafayette streets, by G. Lissenden and H. C. Norris, doing business under the firm name of G. Lissenden & Co. Both proprietors are practical mechanics who personally supervise their shops. The establishment is well supplied with the most approved machinery for turning out all kinds of agricultural implements, including plows, cultivators, harrows, scrapers, etc. The repairing of all kinds of farming machinery is given particular attention, as well as the manufacture of the same to order. A specialty is made of the sulky plows "Star of California" and the riding gang plow "Star of the West." McCall's mammoth road scrapers are manufactured at this establishment. The celebrated combined header, thresher and separator is also manufactured by Lissenden & Co., and they are about completing a contract for thirteen of the machines for the inventors, J. C. Holt and David Young, of this county. The establishment gives employment to twelve men and is doing a good business.
