

TELEPHONE EQUIPMENT TO MEET SPECIAL SERVICE NEEDS

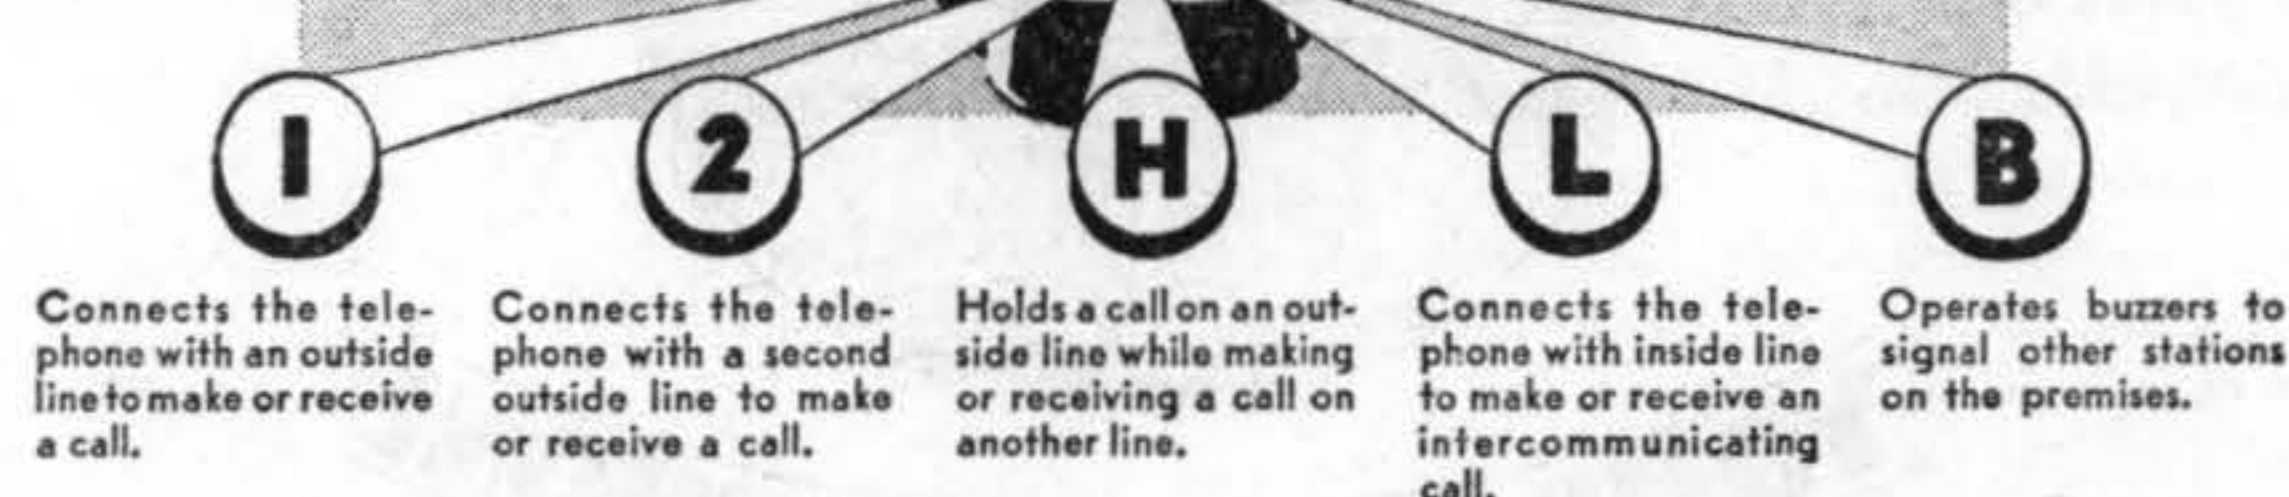

1-EFFICIENCY+SIMPLICITY

A telephone and switchboard combined in one piece of equipment at each location.

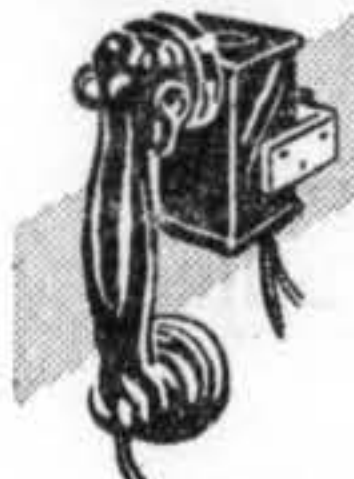

For Homes and Offices

Provides intercommunication and outside service.

2-HANG-UP TYPE HAND TELEPHONE

allows more working space on your desk and yet is within easy reach for instant use. It also is ideal for kitchens and other locations where there is no table space.

4-PORTABLE TELEPHONES . . .

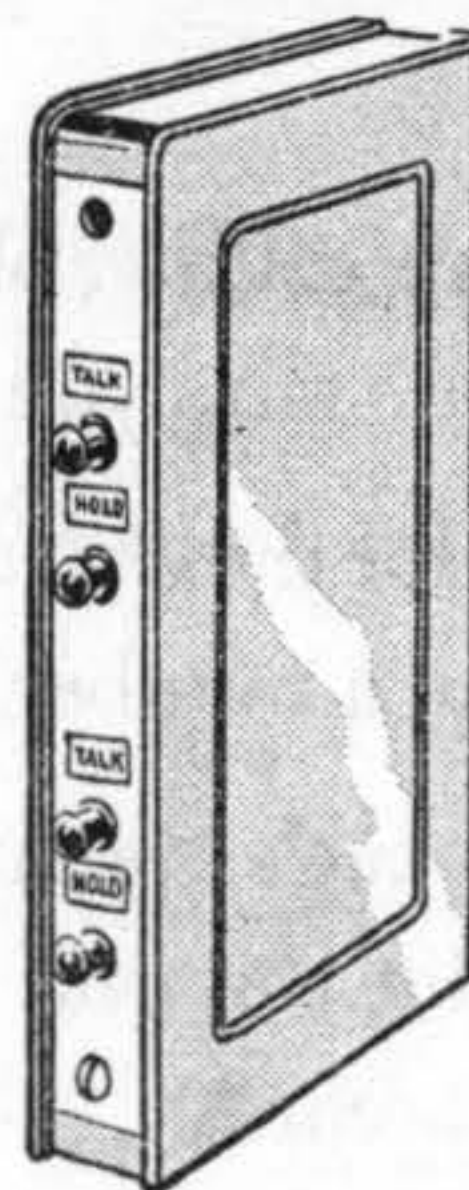

Ideal for guest rooms, club rooms, dens, sun rooms and other occasionally used places. Many modern hospitals, restaurants, beauty parlors and barber shops have portable telephones for the convenience of their patrons.

5-AMPLIFIER TO IMPROVE HEARING

An amplifier can be attached to your telephone. It has several stages of amplification and enables most persons with impaired hearing to enjoy the use of a telephone. Special bell or light signals also are available.

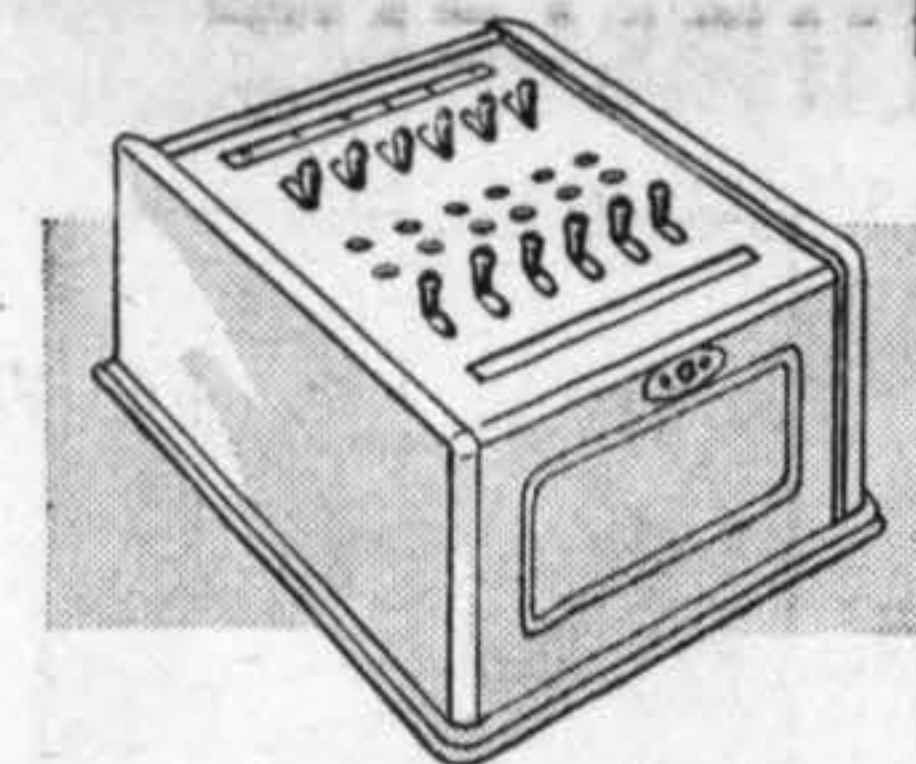

3-KEY BOXES TO INCREASE THE USEFULNESS OF YOUR TELEPHONE

With this little box you can make one telephone do the work of two or more. This is one of several devices that have intercommunicating, holding, pick-up and privacy features. Ideal for homes or offices having two or more telephones.

6-

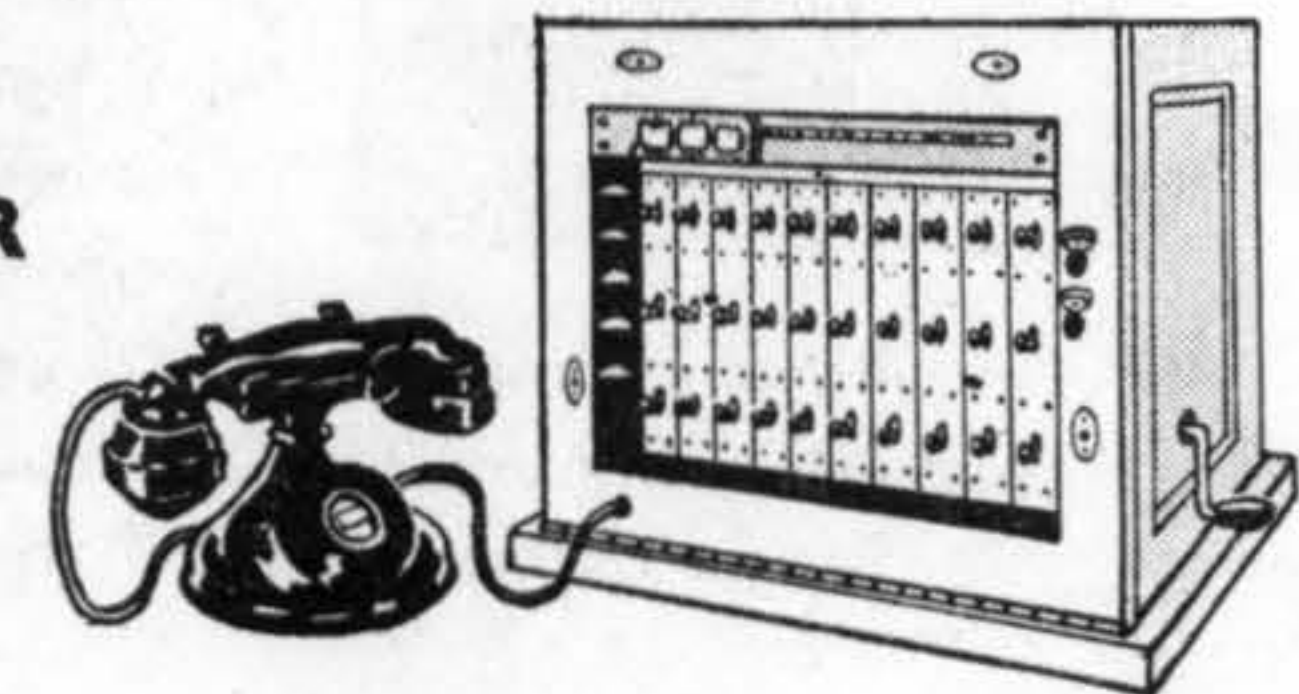

KEY EQUIPMENT ANOTHER CONVENIENCE

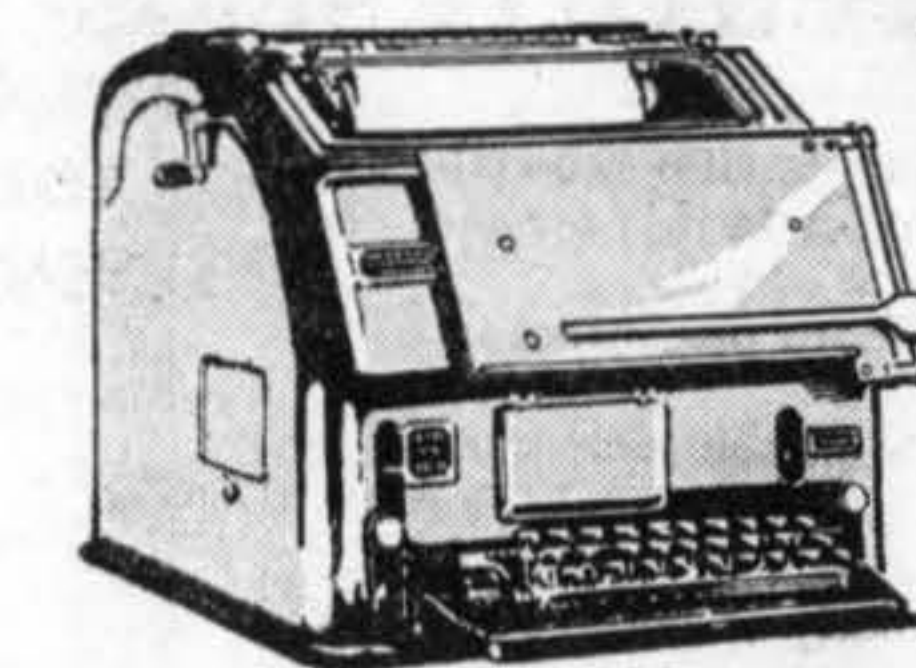

By means of this simple equipment (in several sizes) all incoming telephone calls may be answered at a central point or any one of several locations. It can be adapted to any business telephone layout, large or small.

7-TELEPHONE SWITCHBOARD FOR SMALL BUSINESSES

This small member of the switchboard family centralizes and distributes all your telephone calls. It also provides intercommunicating service. It is easy to operate.

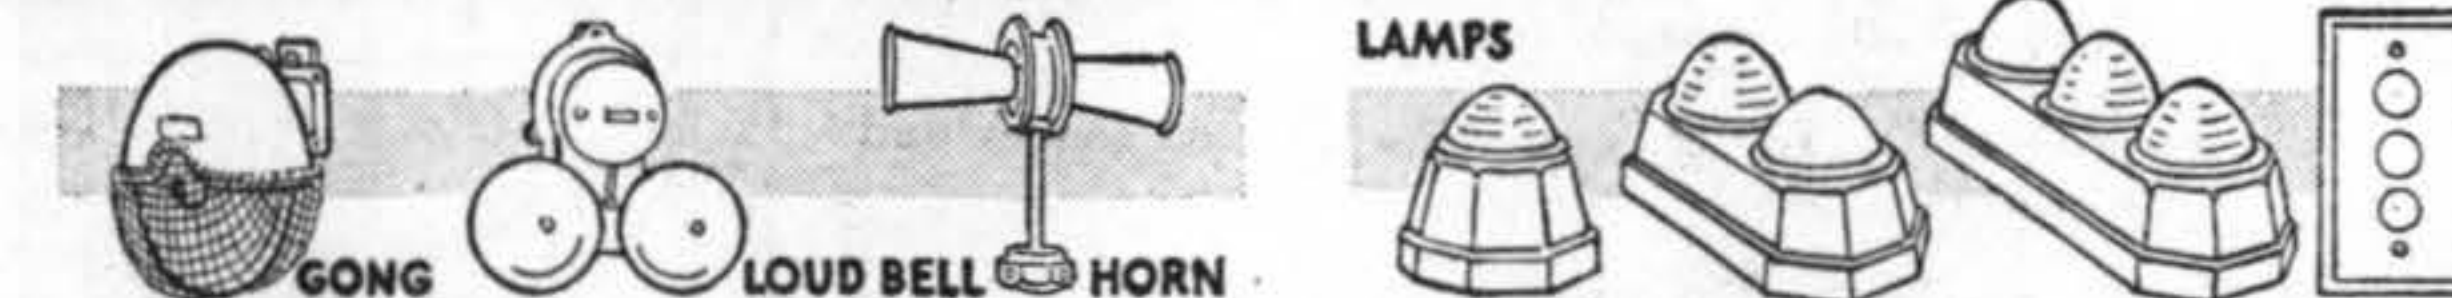

8-

TELETYPEWRITER

The teletypewriter does for the printed word what the telephone does for the spoken word. It provides instant, accurate, printed communication between two or more points; keeps distant departments of a business "in touch"; saves time and prevents errors.

9-AUDIBLE AND VISUAL TELEPHONE SIGNALS

Some locations are so noisy the ordinary telephone bell cannot be heard. In such cases a gong, loud bell or horn is needed. Where there are several telephones at one location, they can be fitted

with bells of different tones. Lamp signals flash a warning when a call comes in . . . and, if there is more than one telephone, tell which line it is on.

There are items of telephone equipment available to meet any arrangement you need to carry on your business or household activities conveniently. A few such items are shown here. There are many others. For information about the equipment shown or about any other items you may require,
